Use of Defibrillators

A Defibrillator should be applied whenever Sudden Cardiac Arrest is suspected, regardless of the time frame involved as it may increase the survival rate. The Defibrillator makes a diagnosis and provides useful information and instruction via a synthesized voice, based on the condition of the patient and will only administer treatment if required.

Role of UNSW Security Services

In the event of a Sudden Cardiac Arrest on campus UNSW Security Services should be notified immediately and requested to call an ambulance.

UNSW Security Services can be contacted on phone no. (2) 9385 6666. For all off campus emergencies call 000.
